

## LF-A1-240U105A/C

Programmable IP67 Isolated LED Driver | Constant Current - Dimmable

### Product family features

- Low THD<10% @60% load, 277Vac
- Rated input voltage: 108-277Vac
- Ta: -40~+55°C
- Ripple current <3%
- 3-in-1 dimming + time dimming+12V AUX output (A version), 3-in-1 dimming + time dimming (C version)
- Standby power consumption≤0.5W
- All-round protections: short circuit, open circuit, over-temperature
- IP67, suitable for Class I light fixtures
- 5 years guarantee

### Product family benefits

- High efficiency
- Flicker free
- Long lifetime and high reliability
- Isolated

### Typical applications

- For shoebox lights, flood lights, street lights and tunnel lights
- For street lighting

## Dimming function instructions

Parameter	Min.	Typ.	Max.	Note
Output current	300mA	700mA	1050mA	Total output power $\leq 240W$

### 0-10V Dimming Operation

- Connect 0-10V signal to DIM terminal.
- In 0-10V dimming mode, when the input voltage is  $0.8V \pm 0.15$ , the light turns off; when it's  $1.0V \pm 0.15$ , the light turns on.
- DIM+/- (without signal connected): 100% rated current output

### Wiring Diagram of 0-10V Dimming

This diagram is only for A version; C version has no 12V+.

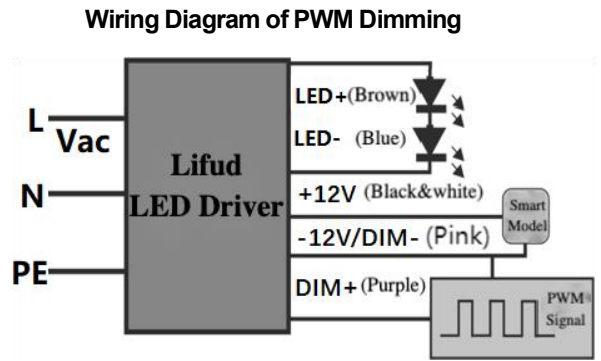

### Dimming Curve

Input: 230Vac; output: 342Vdc/700mA(0-10V dimming depth typical value 10%) (this data is measured by Lifud 0-10V dimmer and the chart is for reference only)

### PWM Dimming Operation

- Connect PWM signal to the DIM terminal.
- Compatible signal range: 1000-2000(Hz), amplitude: 9-10(V)
- DIM+/- (without signal connected): 100% rated current

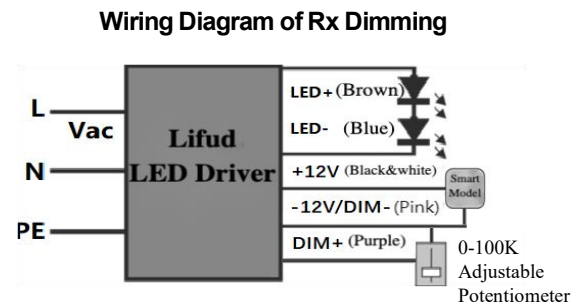

This diagram is only for A version; C version has no 12V+.

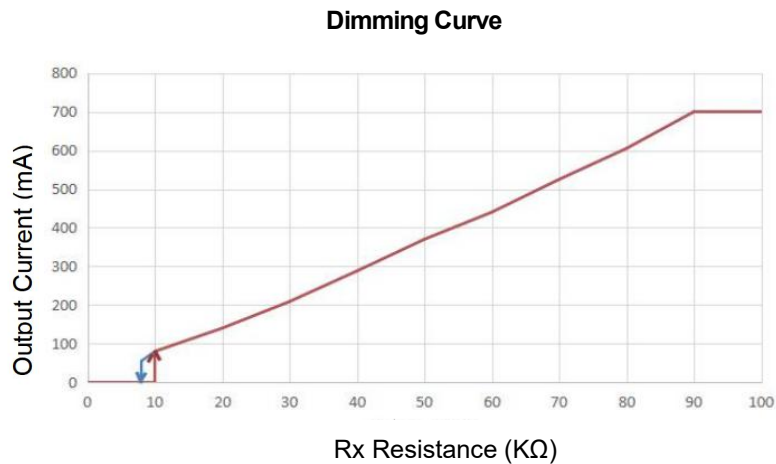

Input: 230Vac; output: 342Vdc/700mA(PWM dimming depth typical value 10%) (this data is measured by Lifud PWM signal generator Tektronix and the chart is for reference only)

### Rx Dimming Operation

- Connect Rx signal to the DIM terminal.
- Range: 0-100KΩ
- DIM+/- (without signal connected): 100% rated current

This diagram is only for A version; C version has no 12V+.

Input: 230Vac; output: 342Vdc/700mA(Rx dimming depth typical value 10%) (this data is measured by resistor dimmer and the chart is for reference only)

Time dimming function

Time dimming mode: there are 6 steps in total. You can set the brightness of each step and the operating time of the first to fifth steps.

Note: In the time dimming mode, after the power is turned on, it will work according to the set dimming curve.

Dimensions

Note: this diagram is a front view and Tc point is on the front side of the driver.

### Colors & materials

Casing material	Metal
Casing color	Silver gray

### Temperature & operating conditions

Ambient temperature range	-40°C - +55°C
Maximum temperature at tc test point	90°C
Temperature range at storage	-40°C - +80°C (6 months in Class I environment)
Humidity range at storage	10-90%RH (no condensation)
Humidity during operation	20-90%RH
Atmospheric pressure	86-106KPa
RoHS	RoHS 2.0 (EU) 2015/863

### Capabilities

Dimmable	0-10V/PWM/Rx dimmable
Open-circuit protection	Open circuit voltage $\leq$ 380Vdc
Overheating protection	When Tc is 95°C $\pm$ 5°C, it will reduce the current and auto-recover when the Tc decreases to the normal temperature.
Overload protection	/
Short-circuit protection	The LED driver will recover by itself and will not be damaged even in the state of short circuit for a long time. (Auto-recovery)

Max. cable length to lamp/LED module	/
Suitable for fixtures with prot. class	I
Control interface	/
Number of channels	1 channel

## Test equipment & condition

Test equipment	AC power source: CHROMA6530, digital power meter: CHROMA66205, oscilloscope: Tektronix DPO3014, DC electronic load: M9712B, LED board, constant temperature and humidity chamber, lightning surge generator: Everfine EMS61000-5B, rapid group pulse generator: Everfine EMS61000-4A, spectroanalyzer: KH3935, hi-pot tester: EEC SE7440, flicker tester (flicker-free coefficient test): Everfine LFA-3000, etc.
----------------	---

If there are no special remarks, the above parameters are tested at the ambient temperature of 25℃, humidity of 50%, full load and input voltage of 230Vac/50Hz.

## Additional information

1. It is recommended that user install the over voltage protection, under voltage protection and surge protection devices in the power supply circuits of light fixtures to ensure electricity safety.
2. The LED driver used in combination with the end device is one of the accessories of the whole light fixture, and the EMC of the whole light fixture is not only susceptible to the driver itself, but to the LED light fixture and the whole light fixture's wiring. Thus, the manufacturer of LED light fixture should re-confirm the EMC of the whole light fixture before the whole light fixture is finished.
3. The number of LED drivers that can be connected to a circuit breaker and the inrush current are tested under the same conditions.
4. The PC cover, casing and end cap for assembling the LED driver in the light fixture must meet the fire rating of UL94-V0 or above.
5. When using the LED driver, please pay attention that the total output power not exceed the maximum rated output power, otherwise the warranty service of LED driver would be failed.
6. When conducting withstanding voltage test on LED driver, please short-circuit the input wire L and N; the positive electrode and negative electrode of the output wire; the positive electrode and negative electrode of the dimming wire and AUX power supply.

## Transportation & storage

Suitable transportation means: vehicles, boats and aeroplanes.

In transit, it is necessary to prepare awnings for rain or sun protection. Moreover, please keep civilized loading and unloading to prevent the vibration or impact on LED driver as much as possible.

The storage of LED driver shall conform to the standard of Class I environment. When using LED drivers which have been stored for more than 6 months, please re-test them firstly. Do not use them unless they are tested to be qualified.

## Cautions

Please use Lifud LED driver according to its parameters in the specification, otherwise the LED driver may malfunction.

Using any incompatible light fixtures or those that have not been certified may cause fire, explosion or other risks.

Man-made damage is beyond the scope of Lifud warranty service.
